# Content Management

Update your web pages from any web browser  
without learning HTML

***Easy-to-use interface lets you make web updates, add multi-media, and create new pages without learning HTML!***

Five Sparrows now offers a new, easy-to-use content management system (CMS) for making your own web site updates, without any existing HTML knowledge.

With our CMS editor, you can make edits to your web site directly from any standard web browser, with little or no training. The CMS works just like most WYSIWYG word processing applications so you can quickly apply your knowledge of familiar tools for updating your web pages.

### **No Software Required**

The CMS editor eliminates the need for software installation or maintenance, since it is a web-based service. You simply sign in through a web browser to get started making changes to your site.

### **Easy Setup**

Once Five Sparrows sets up your CMS editor account, you will receive an invitation via email. After you accept the invitation, you can begin editing by browsing to your web site, then logging in. It's that simple!

The CMS editor is so simple and straightforward that you can make web page updates easily, with virtually no training or technical knowledge.

*Call us today to get started with the CMS editor for your web site!*
